DETAILED ACTION

1. Claims 23-38 are pending.

2. Applicant's cancellation of claims 1, 4-18, 20-22 and addition of claims 24-38 in the reply filed on 9/2/05 has been acknowledged.

- 3. Examiner has found applicable arts while updating the search, the new ground of rejection has set forth.
- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 23-38 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Pat. No. 5,403,586 as is evidenced by WO 96/11711 in view of U.S. Pat. No. 6,528,058 and WO 99/02180.

The '586 patent teaches a vaccine composition comprising LHRH, saponin adjuvant and carrier suitable for human or veterinary use (claims 1, 9-10).

The '586 patent further teaches combining polymers (i.e. DEAE-dextran) and Quil-A saponin and saponin adjuvant encompasses ISCOM (col. 5- 6, overlapping paragraph lines)

As is evidenced by the 711 publication, the typical ISCOM comprises Quil-A, cholesterol, and phospholipids with the ratio of 1:1:1 and can be added to immunogen (i.e. protein, p. 2, lines 8-10).

The '586 patent does not teach specific molar ratio of DEAE-dextran to immunostimulating complex being 50-300, preferably about 125, or 10-100mg DEAE-dextran to 80-800ug of immunostimulating complex or LHRH-diphtheria toxoid conjugate.

Page 3

Art Unit: 1644

However the '058 patent particularly teaches the molar ratio about 50-300, the saponin component at concentration of greater than 50ug-1mg and the polycationic polyeletrolyte (i.e. DEAE-dextran) of 1 mg to 150mg (equivalent to molar ratio of 20-150, col. 4, lines 18-42, claims, claims 13-16). This range meets the economic considerations (col. 4, lines 25-28).

The '180 publication teaches that the LHRH- diphtheria toxoid (DT) conjugated are more immunogenic and effective in fertility control and LHRH has been used to control reproduction (p. 1, lines 21-26, p. 9, lines 1-6, abstract, p. 12-13 overlapping paragraph).

Therefore, one of the ordinary skill in the art would have been motivated to combine the molar ratio of saponin component to DEAE-dextran taught by the '058 patent and LHRH-DT taught by the '180 publication to the LHRH vaccine composition comprising saponin and DEAE-dextran taught by the '586 patent because the molar ratio will provide more cost effective saponin-DEAE-dextran adjuvant without compromising efficacy of adjuvant (col. 4, lines 25-28) and LHRH-DT makes better immunogen and more effective in fertility control.

From the teachings of references, it would have been obvious to one of ordinary skill in art would have had a reasonable expectation of success in producing the claimed invention. Therefore, the invention as a whole was prima facie obvious to one of the ordinary in the art at the time of invention was made, as evidenced by the references, especially in the absence of evidence to the contrary.

- 6. No claims are allowable.
- 7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Yunsoo Kim whose telephone number is 571-272-3176. The examiner can normally be reached on Monday thru Friday 8:30 5:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Christina Chan can be reached on 571-272-0841. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
